Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-25 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Applicant's representation of the catalysts of their claims as being "tertiary amine amides" is confusing as to intent because when A=CH and R1=H there is not, in fact, any tertiary amino group in the structure of the catalyst. Appropriate correction is necessary.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-23 and 25 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-23 of U.S. Patent No. 6,747,069 in view of EP-1,249,461. US Patent # 6,747,069 discloses methods of preparing foams utilizing the catalyst compositions as claimed but differs in that the claims do not recite acid blocking of the catalyst compositions recited are not acid blocked. However, EP-1,249,461 recites that closely related amine catalysts are acid-blocked for the purpose of providing improved flowability and other enhanced properties (see page 3 lines 1-21, as well as, the entire document). Accordingly, it would have been obvious for one having ordinary skill in the art to have acid-blocked the catalyst employed in the methods of 6,747,069 in the manner disclosed by EP-1,249,461 for the purpose of enhancing flowability and other properties in order to arrive at the processes of applicants' claims with the expectation of success in the absence of a showing of new or unexpected results.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Gerkin, Chen et al., and Thiele et al. are cited for their disclosure of relevant catalyst materials in the related arts.
